TESTING, RESULTS, ADVICE
& EDUCATION

Frequently Asked Questions:

Who should get tested?

- People who have **symptoms** of COVID-19.
- People who have come into **close contact** with someone with COVID-19
- People who are not up to date with their COVID-19 vaccinations

Who does not need to be tested?

- People who have tested positive for COVID-19 within the past 3 months and recovered do not need to be retested

- Because people may continue to test positive on a viral test long after they are recovered from COVID-19. These dead viral particles will turn viral tests positive even though they cannot cause disease in others.

When to get tested

- People should be tested to check for infection **at least 5 days after** they last had close contact with someone with COVID-19.
 - The date of the last close contact is considered day 0.

At Home COVID-19 Testing

- Self-Reporting of at home COVID tests can call the HHCC COVID Hotline **(928) 737-6187**

Positive viral test

- **Isolation at home for 10 days** since onset of symptom(s)
- For persons with NO symptoms but POSITIVE test
 - Isolate for **10 days since date of first positive test.**

Safely return to work / school:

- After 10-day isolation
- Fever-free (<100.4°F) for AT LEAST 24 HOURS
- No use of fever lowering medications (like Tylenol)
- Overall, feeling better

****Guidance differs for healthcare personnel & first responders****
